SUBJECT: Work Request ES-82-032
Investigation Plan, Western Processing, Kent, Washington

FROM: Neil Thompson *NET*
Facilities Management Section

TO: Bill Schmidt
Field Operations Team

for John J. Barich, Chief *John J. Barich*
Facilities Management Section

We are requesting that a detailed Investigation Plan be prepared for Western Processing, Kent, Washington. The plan needs to be detailed enough to evaluate the present and past activities at this site and to outline field work required to obtain data necessary for a complete assessment.

The elements of the plan need to specifically include the points discussed below:

1. Historical background with a discussion of past and present site activities.
2. Identification of specific problems and/or questions.
3. Discussion of site practices with regard to environmental regulations.
4. Description of methods for obtaining data needed to complete evaluations including destructive techniques.
5. Recommendation of the best methods for data acquisition estimates, general scheduling, and other resource needs.
6. Preparation of a Plan of Study for groundwater monitoring at the site. This needs to be detailed enough to begin to locate any wells and to recommend monitoring; including associated costs.

This is a high priority site for which we would like this product by May 15, 1982.
